

# One Scan. One Team. One Life Changed.

What began as a volunteer CT scan led to the discovery of serious heart disease and a coordinated response that brought together specialists, home-based care, behavioral health, and rehabilitation.

How coordinated care at Monadnock Community Hospital helped save Michael Greenough's life.

"I have nothing but admiration and awe for our staff. They're a strong and amazing team. This was definitely a case where it takes a village."

— Michael Greenough, Jaffrey

## ● Preventive CT Scan

Volunteer calcium-scoring CT revealed dangerous heart blockages.

## ● Cardiology

Robert Spencer, MD quickly coordinated urgent specialty care.

## ● Cardiac Surgery

Michael underwent life-saving heart surgery in Manchester.

## ● Mobile Integrated Healthcare

Home visits provided lab work and follow-up support during recovery.

## ● Behavioral Health

Emotional support helped him navigate the mental challenges of recovery.

## ● Primary Care

Diabetes and medications were carefully monitored and adjusted.

## ● Cardiac Rehabilitation

Ongoing therapy helped Michael regain strength and work toward returning to the fire service.

Today, Michael is rebuilding his strength and working toward returning to duty as a firefighter and EMS professional.

"That's what I'm working toward: getting stronger and better so that I can get back to caring for my community like they have cared for me."

Exceptional care happens when every part of the healthcare team works together.
